

### DENTURES: COMPLETE OR PARTIAL

I am informed and understand that full and partial dentures are artificial and constructed of plastic, metal, and /or porcelain. I am aware of the difficulties some Patients experience in wearing artificial teeth, including but not limited to soreness, looseness, and potential breakage. I understand that my final opportunity to request changes in the shape, size, and color of the teeth in the denture is at the wax try-in appointment and that any request by me to make changes after that appointment will result in additional fees, the cost of which are my responsibility. Further, I understand that it is my responsibility to return for the delivery of my denture/dentures within 20 days after completion by the laboratory and that my failure to do so may result in a poor fit and/or the need for remake, the cost of which is my responsibility.

I am informed and understand that immediate denture/dentures (those place immediately following extraction of my teeth) may be extremely sore and uncomfortable initially. They may require several adjustments in the days and weeks following extraction and placement, the cost of which is included in the cost of my denture/ dentures. Additionally, it is common for immediate denture/dentures to require up to 2 in-office relines and 1 laboratory reline within the first 3 to 12 months after extraction and placement, the cost of which is included in the cost of my denture/dentures.
